

Comment of FM translators for AM stations

From Darrin Evans,

President of Skytower Communications Group, LLC

Licensee of WLCK-AM, Scottsville, Kentucky

To whom it may concern;

I STRONGLY support the use of FM translators for daytime AM stations.

I purchased WLCK-AM in June of 2007 and since taking ownership, I've realized the limited nature of our nighttime signal. WLCK is 76 watts at night, and many nights we can't even pick up our signal at our studio just two miles away!

Please adopt the proposal to allow the use of FM translators for AM stations!

Thank you for your consideration.
